

Medical Freedom Movement Taking Hold in Montana

FROM THE GROUP THAT BROUGHT "VAXXED" TO BOZEMAN

Montanans for Medical Freedom Coalition

We are at an unprecedented point in time. There is a growing coordinated effort across the U.S. to eliminate our human rights to opt out of pharmaceutical procedures such as vaccines, cancer drugs and limit alternative care options like natural home birthing. Up to now, this was done by using coercion tactics, omission of right to choose, lying about the law, and financial incentives but now it is being done via legislative actions as well.

Last year there were over 100 legislative bills proposed in various state legislatures that would have either removed religious and/or philosophical exemptions to compulsory inoculation. Two were successful; such as California SB277, which removed the personal belief vaccine exemption, and California SB792 mandating vaccination for school teachers and volunteers. The language on

most of these bills was eerily similar from state to state, so if the locally elected politicians were not writing the bills, then who was?

At the same time, the pipeline of potential vaccines is at an all-time high. Yet, the vaccine manufacturers have

segments: infectious diseases, cancer, allergy, and autism. Autism! Need we say more?

Collectively, this was a wake-up call for those of us in Bozeman. Not only has our media been wrongly influenced by pharma, but also many of our elected officials. Last year, we put plans in motion, grew a large online following and merged with *Families for Health Freedom of Missoula* to form *Montanans for Medical Freedom Coalition (MMFC)*.

This is a diverse group of families and industry professionals that brings a wide variety of expertise to actualize our goals. This includes, but is not limited to, extensive political and advocacy experience, financial and business expertise, social media and marketing expertise, holistic and natural medicine, video and photography. Our passion for our rights is what brought us together and what will drive us forward. ■

If you are a Montana resident and passionate about keeping these rights for yourself, your children and your grandchildren, please contact us at MMFC@ProtonMail.com and check us out on [Vimeo.com/mmfc](https://www.vimeo.com/mmfc).

complete immunity from any lawsuits for injury or death. Grand View Research, Inc. estimated that in eight years the value of the world vaccine market will grow to \$77.5 billion, up from \$32.5 billion in 2015. Currently, there are 271 new vaccines being developed and that market is divided into four
