

Happiness Is to Be... *PAIN FREE!*

RADON THERAPY AT THE FREE ENTERPRISE

Leah Compton

The Free Enterprise Radon Health Mine in Boulder, Montana has been helping people suffering from chronic inflammation and autoimmune diseases since 1952. Originally, the Free Enterprise was a uranium mine. Mining engineer Wade V. Lewis, Sr. was giving a tour to potential investors when one reported experiencing relief from severe bursitis. Word spread and people with various ailments journeyed to Montana to visit the mine.

Soon, hard-rock mining operations were halted and the owners were compelled to develop a health destination for afflicted people.

Fast-forward 65 years and several generations of Lewis owners later, and you'll learn the pain relief experienced by early visitors is

a term now known as "radiation hormesis." Radiation science defines hormesis as the concept that exposure to low doses of any otherwise toxic agent can stimulate one's immune system and self-repair mechanisms. While medical facilities artificially produce low-dose levels for their research and treatments, the Free Enterprise Mine's unique geology creates these low levels naturally.

Over the past several decades, the Free Enterprise has seen numerous changes in the way chronic pain and other inflammatory diseases are

treated. One frequent visitor to the mine says they did not respond well to the side effects of traditionally prescribed drugs and found the mine an effective, non-addictive way to live the active life they wanted.

Low-dose radiation therapy is insurance-eligible and medically supervised in other parts of the world. Patricia Lewis (owner from 1994 to 2014) traveled to

Those suffering from chronic pain or autoimmune disorders may find this modality effective for, but not limited to:

- Arthritis (OA, RA, JRA)**
- Crohn's Disease & IBS**
- Prostate (BPH)**
- Scleroderma**
- Emphysema**
- Bursitis & Gout**
- Pain from Illness or Injury**
- Multiple Sclerosis**
- Fibromyalgia (FMS)**
- Migraine Headaches**
- Psoriasis & Eczema**
- Ankylosing Spondylitis**
- Ulcerative Colitis**
- Bronchitis & Asthma**
- Lupus**

ing local attractions and exploring the outdoors. Local visitors will take radon therapy on an “as needed” basis as their daily schedule allows. A 3-day weekend or a long day in the mine is all that some locals need.

The Free Enterprise Mine is a pet-friendly establishment and we encourage arthritic pets to join in on treatments. Please contact us in advance to reserve one of our RV-park sites or to inquire about other overnight accommodations.

Clients have the choice of the underground gallery experience or the surface level Radon Room. Yes, you can have your life back—free from chronic pain! ■

For more information about resources and suggested processes, please visit our website at RadonMine.com. You can download our brochure, call us toll-free at 1-888-890-5860, or find us on Facebook!

Europe to compare the “radon spas” in Germany, the Czech Republic, and Austria. Overseas pain sufferers frequently visit the various health resorts, but this

often requires months of in-advance booking and structured therapy sessions. While comparable in radiation levels to the Free Enterprise, the European facilities tend to be more medical and extravagant.

Visitors to the Montana mine experience a more flexible schedule with therapy occurring in any number of ways. Out-of-state visitors will schedule up to 10 days and accumulate some 30 to 60 hours, rotating therapy hours with tour-

Boulder is located midway between Butte and Helena at Exit 164 off Montana's I-15. The Free Enterprise Mine is exactly two miles from Boulder's Main Street on a paved country road.

NOTE: The Free Enterprise Radon Health Mine facility is available for persons seeking an alternative or a complement to present treatment for pain relief and disease symptom management. We suggest that minor children and pregnant women consult their physician. At this facility, 32 hours of radon exposure over a 10-day stay is the equivalent of approximately 6 mSv or 0.6 rads or 0.6 rems or 0.6 Roentgens—just twice the radiation exposure from normally occurring background sources. For further perspective, populations thrive at natural background levels in excess of 260 mSv annually with no adverse effects. Doctor's inquiries are welcome. Supportive technical information is available upon request.
